

# **Saving Lives with Big Data: Precision Medicine and Health Informatics**

# After this video you will be able to..

- Give examples of sensor, organizational, and people-generated data used in precision medicine
- Explain to a friend why the integration of different streams of data is critical to advancing healthcare

Why is this important now?

## Cost per Genome

# Genome Data Storage

AGTTA → 700MB

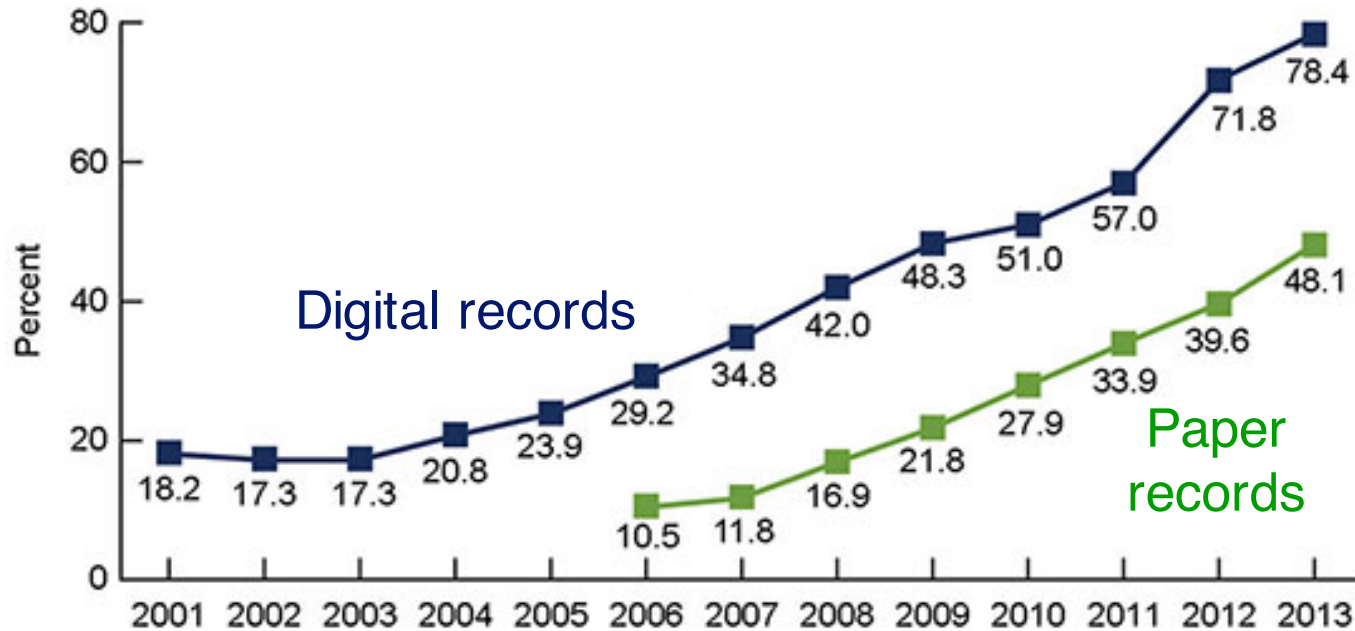

200GB

1 day

# Health Records → Digital

120 Terabytes in 2013  
2X more than in 2011

# Recent changes → Big Data for Healthcare

Reduced Cost Analysis  
Cheap, Large Data Storage  
Digitization of Records

# Why can Big Data help?

# Sensor Data

101100010 →

# Sensor Data

More sensors, More places  
Data → Storage & Analysis

# Fitness Device Industry

Fitness Tracker Hardware Annual Unit Sales

By Device Maker, U.S. Only

Source: NPD Group, BI Intelligence Estimates; Annual Data From April Through March

# Data Generated?

2-5 GB / day

# Save health care costs?

# Organization Data

# Scientific Data and Knowledge-bases

Experimental Data

Computed Data

# Scientific Data and Knowledge-bases

# People Data

# Mobile Health Apps

Webby

>100,000 health apps  
(iTunes & Google Play)

By 2017 →  
\$26 billion market?

# A story:

## The impact of novel people-generated data

Have you had  
any reactions to  
your medications?

It's been a month...  
Was that a reaction?

# Today → Self-Reported Data Social Media

Integration →  
Personalization →  
Precision

A diagram illustrating the integration of three entities: People, Sensors, and Organizations. Three light blue circles are arranged in a triangle. Green arrows point from each circle towards a central point. Above this central point is a dark green rectangular box containing the word 'integration' in white text.
